

Hi, my name is

Brittany Chiang.

I build things for the web.

I'm a software engineer specializing in building (and occasionally designing) exceptional digital experiences. Currently, I'm focused on building accessible, human-centered products at [Upstatement](#).

[Check out my course!](#)

01. About Me

Hello! My name is Brittany and I enjoy creating things that live on the internet. My interest in web development started back in 2012 when I decided to try editing custom Tumblr themes — turns out hacking together a custom reblog button taught me a lot about HTML & CSS!

Fast-forward to today, and I've had the privilege of working at [an advertising agency](#), [a start-up](#), [a huge corporation](#), and [a student-led design studio](#). My main focus these days is building accessible, inclusive products and digital experiences at [Upstatement](#) for a variety of clients.

I also recently [launched a course](#) that covers everything you need to build a web app with the Spotify API using Node & React.

Here are a few technologies I've been working with recently:

- JavaScript (ES6+)
- TypeScript
- React
- Eleventy
- Node.js
- WordPress

02. Where I've Worked

Upstatement

Engineer @ Upstatement

May 2018 – Present

Scout

Apple

Scout

Starry

MullenLowe

- ▶ Write modern, performant, maintainable code for a diverse array of client and internal projects
- ▶ Work with a variety of different languages, platforms, frameworks, and content management systems such as JavaScript, TypeScript, Gatsby, React, Craft, WordPress, Prismic, and Netlify
- ▶ Communicate with multi-disciplinary teams of engineers, designers, producers, and clients on a daily basis

03. Some Things I've Built

Featured Project

Halcyon Theme

A minimal, dark blue theme for VS Code, Sublime Text, Atom, iTerm, and more. Available on [Visual Studio Marketplace](#), [Package Control](#), [Atom Package Manager](#), and [npm](#).

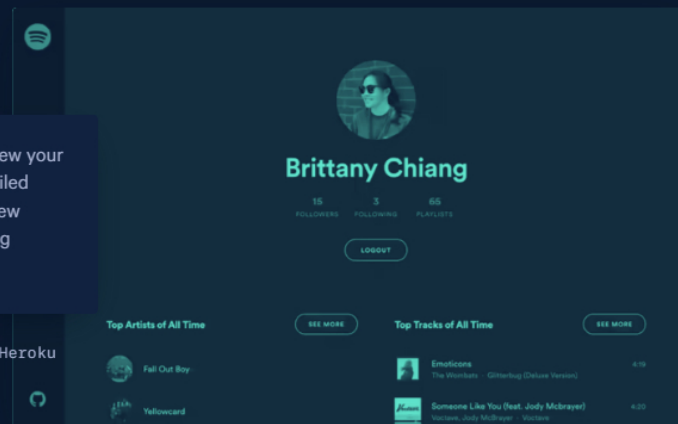

[VS Code](#) [Sublime Text](#) [Atom](#) [iTerm2](#) [Hyper](#)

Featured Project

Spotify Profile

A web app for visualizing personalized Spotify data. View your top artists, top tracks, recently played tracks, and detailed audio information about each track. Create and save new playlists of recommended tracks based on your existing playlists and more.

[React](#) [Styled Components](#) [Express](#) [Spotify API](#) [Heroku](#)

Build a Spotify Connected App

THE NEWLINE GUIDE TO

Build a Spotify Connected App

Brittany Chiang

Having struggled with understanding how the Spotify OAuth flow works, I made the course I wish I could have had.

Unlike tutorials that only cover a few concepts and leave you with half-baked GitHub repositories, this course covers everything from explaining the principles of REST APIs to implementing Spotify's OAuth flow and fetching API data in a React app. By the end of the course, you'll have an app deployed to the internet you can add to your portfolio.

Other Noteworthy Projects

[view the archive](#)

Integrating Algolia Search with WordPress Multisite

Building a custom multisite compatible WordPress plugin to build global search with Algolia

[Algolia](#) [WordPress](#) [PHP](#)

Time to Have More Fun

A single page web app for helping me choose where to travel, built with Next.js, Firebase, and Tailwind CSS

[Next.js](#) [Tailwind CSS](#) [Firebase](#)

Building a Headless Mobile App CMS From Scratch

Find out how we built a custom headless CMS with Node, Express, and Firebase for a project at Upstatement

[Node](#) [Express](#) [Firebase](#) [Vue](#)

OctoProfile

A nicer look at your GitHub profile and repo stats. Includes data visualizations of your top languages, starred repositories, and sort through your top repos by number of stars, forks, and size.

[Next.js](#) [Chart.js](#) [GitHub API](#)

Google Keep Clone

A simple Google Keep clone built with Vue and Firebase.

[Vue](#) [Firebase](#)

Apple Music Embeddable Web Player Widget

Embeddable web player widget for Apple Music that lets users log in and listen to full song playback in the browser leveraging [MusicKit.js](#). Read more about this project on [9to5Mac](#).

[MusicKit.js](#) [JS](#) [SCSS](#)

Apple Music Facebook Messenger Integration

Facebook Messenger chat bot extension featuring authentication and full integration with the Apple Music API

Personal Website V3

Third iteration of my personal website built with Jekyll and hosted on GitHub Pages.

Personal Website V2

Second iteration of my personal website. Designed and developed with a conscious effort to avoid using any superfluous frameworks like Bootstrap

full song streaming from within the Messenger app. Read more about it on [The Verge](#).

Ember JS SCSS

Jekyll SCSS JS

superfamous frameworks like Bootstrap.

Jekyll SCSS JS

Screentime 2.0

Starry Station android app feature that provided users with the ability to easily filter content, pause the internet, and even create custom rules for blocking apps like Facebook and Twitter right from their phones.

Cordova Backbone Marionette

React Profile

Online version of my 2016 resume made for fun. I was interested in learning React.js, so I found a simple tutorial and it spun into a weekend project.

React CSS

Personal Website V1

My first portfolio website I designed and built in 2014. I learned quite a bit about HTML, CSS, and SEO. Since then, I think my web development and design skills have improved immensely.

HTML CSS JS Bootstrap

Fontipsums

Simple website to display some of my favorite font pairings combined with some fun lorem ipsum variations found on the web.

HTML SCSS

NU Women in Tech

Complete overhaul and redesign of NU Women in Tech's club website using Jekyll, built while serving as web chair on the e-board.

Jekyll Bootstrap

Show Less
